

# Asset Management > View Hardware > Actions > Details > Update Hardware Details and Configuration

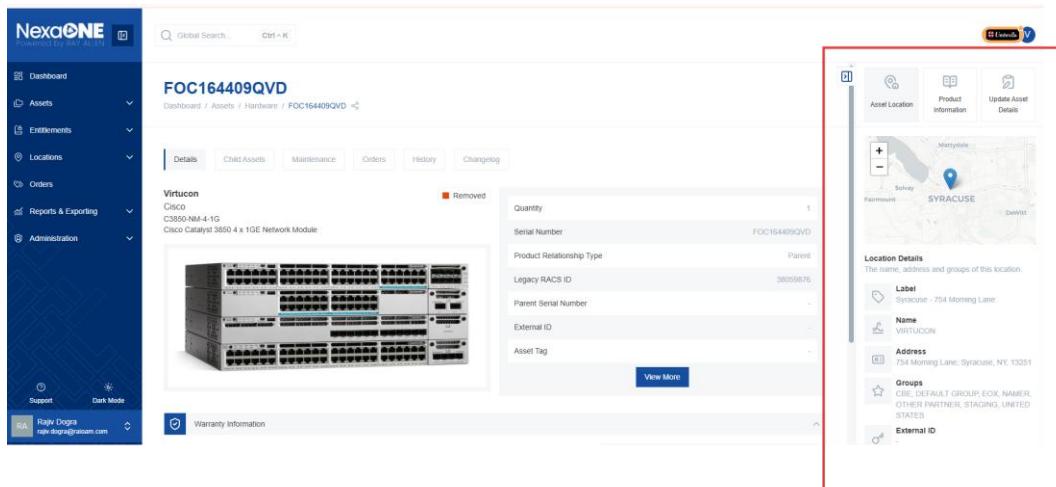

This guide details how to update asset information within NexaONE, covering modifications to asset details, location, coverage, and configuration.

From the main menu in NexaONE, locate and click on the "Assets" menu and go to the required asset table.

The screenshot shows the NexaONE interface. The left sidebar has a 'Assets' menu with a 'View Hardware' option. A red box highlights these. The main area shows a 'Hardware' table with a red box around the third row, which is selected. The right sidebar shows detailed information for the selected asset, including location, product information, and update buttons.

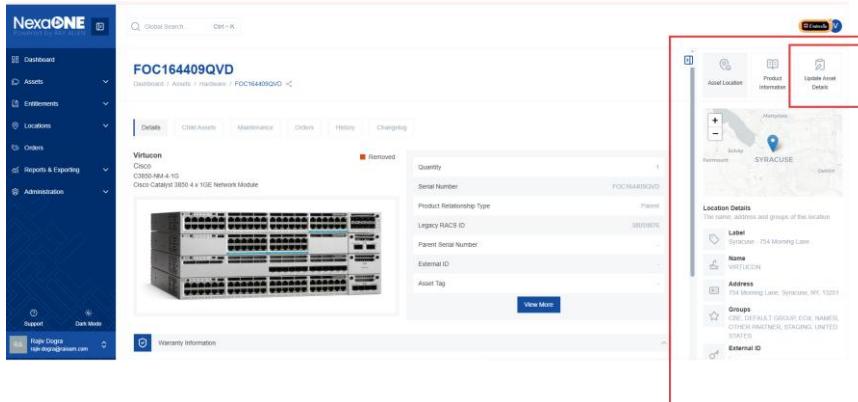

In the specific asset selected from the asset table, the contextual pane is visible on the right sidebar. This pane displays the key details such as location, external IDs, and other information. From here you can update the required information.

The screenshot shows the details for the asset 'FOC164409QVD'. The left sidebar has a 'Details' tab selected. The main area shows the asset's details, including its name, manufacturer (Cisco), model (C3850-48P-4-1G), and a image of the hardware. The right sidebar has tabs for 'Asset Location', 'Product Information', and 'Update Asset Details'. The 'Asset Location' tab is active, showing a map of the asset's location in Mattydale, NY, and providing location details like label, name, address, and groups.

# Updating Asset / Hardware Details & Identifiers

For the selected asset, click the "Update Asset Details" button in the contextual pane to view the modification options.

Update Asset Details

The "Update Asset Details" section allows you to modify various attributes of the asset. Available update options include:

- Serial Number:** Correct any typos or mistakes in the serial number.
- External IDs:** Add or modify external identification numbers associated with the asset.
- Part Number:** Correct any errors in the part number. While generally correct, this option allows for corrections.
- Asset Status:** Update the current status of the asset. This can include:
  - Live Environment: The asset is actively in use.
  - Virtual Inventory: The asset is part of the virtual inventory.
  - Removal from Service: The asset is being or has been removed from service.

- It also provides options to modify/update Asset Identifiers
  - **Host Name/DNS Name:** This helps in identifying and communicating about the asset.
  - **IP Address/MAC Address:** Keep these updated for accurate network information.
  - **Asset Tags** are specific tags for the individual asset.
  - **Departmental Tags** are related to the department using the asset. These are useful for searching and categorizing assets.

## Changing Asset Location

- To change the asset's location, under update Asset Details in contextual pane, select Location sub-tab and then add the desired group and specific location. This updates the physical or virtual location of the asset.
- The number in parentheses next to the location indicates the site ID, is a unique identifier for the location.

If the desired site is not listed, you may need to update locations in the existing location groups. Navigate to the locations section to manage and add new locations.

The screenshot shows the 'Locations' section of the NexaONE interface. On the left, a sidebar menu has 'Locations' selected. A red box highlights the 'View Locations' link under 'Locations'. The main content area displays a table of locations with columns for Client Name, Label, Address Name, Address 1, Address 2, and City. A red box highlights the 'Add New Location' button in the top right corner of the table area.

## Updating Coverage

- To change the asset's coverage, under update Asset Details, select Coverage sub-tab and update the service contract and service level for the asset. This is useful when an asset's service agreement changes.

The screenshot shows the 'View' page for an asset. The sidebar menu has 'Assets' selected. The main content area shows a hardware asset (Cisco Catalyst 3850 4x 1GE Network Module) with a 'Removed' status. A red box highlights the 'View More' button. To the right, a 'Update Asset Details' dialog is open, showing tabs for 'Asset Location', 'Product Information', 'Update Asset Status', and 'Coverage'. The 'Coverage' tab is selected, and a red box highlights it. Within the 'Coverage' tab, there are fields for 'Contract', 'Service Level', and 'Contract Status'.

This action initiates the change process for the selected service for the asset. A ticket might be opened to track the service change.

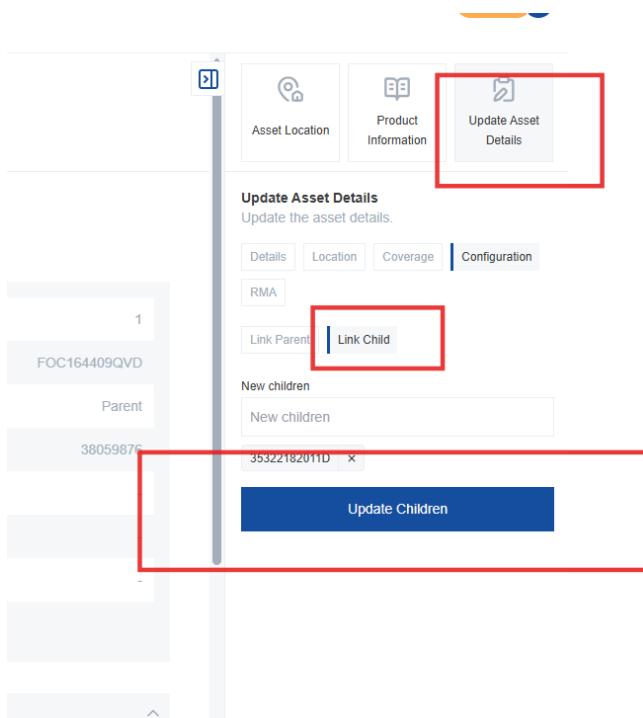

The screenshot shows the 'View' page for the same asset, with the sidebar menu still showing 'Assets'. The main content area shows the asset details and a 'View More' button. To the right, the 'Update Asset Details' dialog is open, with the 'Coverage' tab selected. A red box highlights the 'Coverage' tab. The dialog shows fields for 'Contract', 'Service Level', and 'Contract Status'.

# Update Configuration

Configuration options are available under the configuration sub-tab.

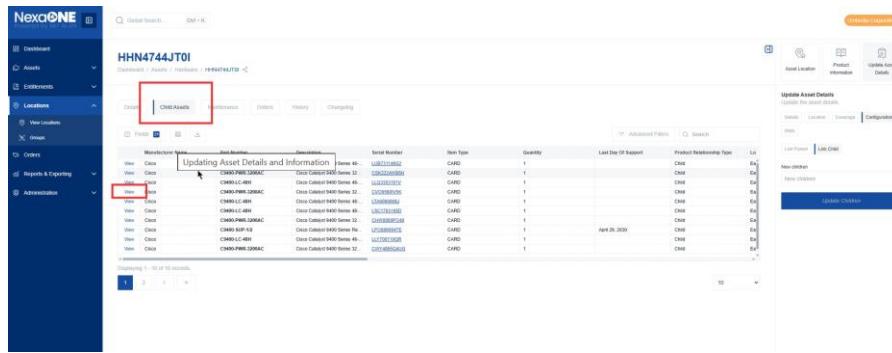

## Configuration: Linking Child Assets

- In the configuration section, particularly for parent assets, link new child assets. This establishes a relationship between a parent asset and its associated child assets.
- Enter the serial number of the child asset to link it to the parent. This creates the link in the system.

## Configuration: Removing Child Assets

- To remove child assets associated with the asset and assign them to a different parent, click on the child assets tab on the Asset details page.
- Find the asset you want to move and click "View". This will display the details of the child asset.

- For the selected child asset, in the contextual pane select configuration option in the Update Asset Detail, then select “Link Parent” option. Enter the new parent's serial number. Start typing the serial number, and the system should suggest matching assets.

Select the correct parent asset from the search results. Click the "Update Parent" button to finalize the change. This completes the reassignment of the child asset to the new parent.
